About Grady

For more than 125 years Grady Health System has been the cornerstone of healthcare in the Atlanta region. In 2017, we continued to do what we do best – innovate. Spurred by growing and changing patient needs, we devised new solutions to meet the challenges of today’s evolving healthcare needs. By tapping deeper into the talents of our exceptional staff, we’re serving more patients than ever, with many receiving services that extend beyond quality medical care and embrace the total needs of an individual. By teaming with our partners – physicians from the Emory and Morehouse schools of medicine – the entire community benefits from unparalleled expertise in specialties like trauma, cancer, burn, neurology, cardiology and the treatment of chronic diseases. Add to that our focus on wellness through family medicine and senior care and it’s easy to see Grady’s impact on the thousands of lives we touch each year.
In the last several years, Grady has received a lot of attention for the dramatic changes and improvements we have made. Much attention has been paid to investments such as the Correll Cardiac Center, Marcus Stroke and Neuroscience Center, the Marcus Trauma Center, $350 million spent on new facilities and technologies, state-of-the-art surgical suites and so much more. We have introduced new physicians, strengthened old partnerships and expanded our services.

The progress continued in 2017, as we completed the expansion of our Emergency Department to enhance its capacity, efficiency and care quality; launched a new outpatient center in the renowned Marcus Stroke and Neuroscience Center to grow Grady’s neurological service capabilities; moved into the top tier in advanced imaging by deploying a new generation of CT scanning technology; and opened our Brookhaven Health Center to better serve patients, including children and families.

But these changes – and more planned for the future – are really just a manifestation of our underlying commitment to innovation, something that has been a part of Grady’s DNA since we opened our doors in 1892. Grady has always been a place that seeks solutions, embraces change and explores new ways to improve health outcomes for patients and the larger community.

**Changing the definition of healthcare**

We understand that, to succeed, Grady must change with the times. To that end, we have rethought traditional healthcare delivery models and redefined what we do to care for our patients and the community at large.

The traditional model of healthcare delivery is fairly simple: Treat patients who show up with dignity, compassion and respect; use well-trained physicians, nurses and other medical professionals; prescribe appropriate medications; recommend follow-up care; and send the patients home. This approach still works for some people. But for those with...
chronic health conditions who lack adequate social and community support systems, it’s a formula for failure.

There is no room in the traditional model for the patient who doesn’t have access to medications or doesn’t understand how or why to take them. The traditional model assumes patients recognize the importance of follow-up care and monitoring. It makes the patient solely responsible for scheduling appointments and arranging transportation. But, most important, the traditional model – which developed when most people had health insurance – never factors in what happens when people do not. Or when their insurance is inadequate.

Applying the traditional model of healthcare delivery to today’s patients means that treated patients often get sick again, return to the emergency room for care and find themselves readmitted. The human costs are great and the financial impact is considerable.

Grady believes there’s a better way. We embrace population health initiatives, which are solutions that combine clinical care with robust social services, counseling, patient education and community support. This allows us to create deep, ongoing care relationships that better address patients’ social and clinical needs. Grady creates those relationships in four ways:

• **Chronic Care Clinic:** The Chronic Care team finds alternative ways to treat patients who frequently visit the Emergency Department, but who really need effective primary care. It also activates a variety of social services to support better health outcomes.

• **Mobile Integrated Health:** Patients who frequently use emergency medical services often have chronic disorders. With the right supportive care at home, these patients may be able to avoid another EMS call and trip to the hospital. Our Mobile Integrated Health team proactively reaches out to these patients before they call for emergency care.

• **Transitions of Care:** Patients discharged from the hospital continue to recover at home. If they follow their treatment plans, take their medications and do what their doctors advise, they are likely to get better. But those who do not take appropriate care can find themselves readmitted to the hospital. Transitions of Care supports patients in the 30- to 60-day period following discharge to help keep them on the path to full recovery.

• **Diabetic Teleretinal Program:** Thousands of our patients are diabetic and at risk for eye disease that can lead to vision impairment or blindness. That makes annual screenings critically important. Our new program expands screenings outside the diabetes and ophthalmology clinics to make them part of routine primary care.

---

**Marcus Trauma Center Earns Elite National Recognition from ACS**

The Marcus Trauma Center is among Grady’s “crown jewels,” with medical capabilities and expertise that are in the top tier in our state and region. In 2017, the Marcus Trauma Center earned Level I Trauma verification from the American College of Surgeons (ACS), the highest national recognition awarded to a trauma center. This prestigious designation came after an extensive review by external trauma experts who assessed our performance across more than 200 standards. Thirty-one years ago, Grady was designated a Level I trauma center by the state of Georgia. The ACS verification further validates that we are meeting the highest standard of excellence for trauma care.
These population health initiatives, and others we will deploy, benefit all our stakeholders. Patients stay healthier. Our medical professionals can offer the right care in the right setting to each patient. Hospital resources are allocated more efficiently. Costs are reduced. And the community’s overall health improves. We are excited by the results we have seen so far and expect more benefits in the future.

**Strong partnerships support good growth**

Over the last several years we have reported a steep rise in demand for Grady’s services – a trend that continued in 2017. Total patient visits increased 4 percent, Emergency Department patient counts rose by 10 percent, and the number of surgical procedures grew 8 percent to 14,000. Our facilities are at capacity, which means we must grow.

In 2017, our local government partners, Fulton County and DeKalb County, approved the issuance of more than $82 million in bonds to provide half the funds needed for a two-tiered Grady expansion. Bond proceeds, when matched by an equal amount in foundation and philanthropic gifts, will underwrite construction of a new Center for Advanced Surgical Services to increase capacity for essential surgical services and outpatient clinics. We will also expand the Ponce Center to improve our response to Metro Atlanta’s HIV/AIDS epidemic. These projects represent the first capital investment in Grady by the two counties in a quarter-century, and we are thrilled with their affirmation of Grady’s mission and strategic direction.

**People fuel our progress**

All of our progress results from the support of Grady’s many stakeholders. We are fortunate to be led by a talented and engaged board of directors, chaired by Frank Blake, which guides our strategic vision and works to ensure that Grady remains financially sound. Every step in our journey is supported by the Grady Health Foundation and its board, chaired by Pete Correll. The foundation has been instrumental in securing private and philanthropic support, and in strengthening partnerships with a range of community stakeholders. Our long-standing, mutually beneficial relationships with the Emory and Morehouse schools of medicine are crucial to our ability to deliver patient care. Grady is one of only a few health systems in the nation whose patients are cared for by faculty members of two medical schools, and the talent and expertise of these professionals is foundational to our success.

Thousands of Grady employees come to work each day with a passion to provide patients the best care possible. We continue to make strides to strengthen our organizational culture and engagement, and I am grateful to each of our more than 6,000 employees for their commitment to Grady’s unique mission.

Looking ahead, the efforts of all these stakeholders, as well as that of generous donors, business and community leaders and volunteers, will allow us to keep developing new solutions to provide our patients better care and make our community healthier. We sincerely thank all our supporters and partners for their contributions to Grady’s vital work, and for the legacy of improved health we are jointly creating for Metro Atlanta.

John M. Haupert, FACHE
President and Chief Executive Officer

Grady has always been a place that seeks solutions, embraces change and explores new ways to improve health outcomes for patients and the larger community.
Meeting the Challenge of Growing Demand

Our metropolitan area, the nation’s 11th-largest, continues to grow rapidly – and so does the demand for the quality medical care we provide. Grady’s unquestioned leadership in specialties such as trauma, stroke and burn is a major contributor to increased patient volumes.
125 Years New: A Continuing Heritage of Innovative Solutions

When Grady opened its doors in June 1892 with just 110 beds, four doctors and 12 nurses, it was a pioneer – Atlanta’s first and only public hospital established to address the medical needs of all citizens, rich or poor. In the ensuing 125 years, Grady has often been at the forefront of new solutions to address our region’s needs – from the first open heart surgery performed in Georgia, to creating national models for the treatment of diabetes and sickle cell disease, to becoming an international leader in advanced stroke treatment. 125 years in, we’re still innovating, finding new solutions that translate into better care for our patients and improved health outcomes for our community.
Transitions of Care: A Better Path to Full Recovery

When an inpatient is discharged, their top priority, and ours, is to make sure they don’t need to return for another hospital stay. The interdisciplinary team at our Transitions of Care (TOC) program works closely with newly discharged patients to help their recovery go well. Educating patients about their prescribed medications, ensuring follow-up appointments are promptly scheduled, and addressing needs as diverse as wound care and behavioral health, the TOC offers a new, fresh approach for better patient outcomes.

Educating patients offers a new, fresh approach for better patient outcomes
Chronic Care Clinic: A Comprehensive Alternative for Better Patient Outcomes

Some Grady patients visit our Emergency Department more than 12 times a year. Many would stay healthier if they knew how to connect with a primary care doctor and get regular checkups. Guided by that insight, we established the Chronic Care Clinic (CCC) with the goal of delivering the right care at the right time in the right setting. Frequent users of the ER are invited to meet with the CCC team, which includes nurses, community and behavioral health specialists, pharmacists and advance practice providers. The team works with each patient to create a customized roadmap to better care. Often, the team activates social services, including financial, housing and transportation assistance, that contribute to a better, healthier future.
Reaching Farther: Bringing EMS Expertise to New Communities

Grady is widely known for its best-in-class emergency medical ambulance service with highly trained personnel and cutting-edge technology and equipment. We are now providing state-of-the-art service in communities across middle and South Georgia. As the contracted EMS provider for 12 counties outside Atlanta, including communities like Milledgeville and Bainbridge, Grady is improving response times and service quality, while collaborating closely with the local hospitals that provide care.
Mobile Integrated Health: Proactive Care Hits the Road

When you see a Grady EMS vehicle move out, it’s often responding to a healthcare emergency. But for some patients, especially those with chronic but not life-threatening conditions, an ambulance ride and an Emergency Department visit can be avoided with the right intervention and care at home. The Grady EMS Mobile Integrated Health Program is designed to reduce and prevent the need for emergency department visits by teaming a paramedic and a nurse practitioner who visit, assess and treat patients in their homes. Their work helps keep patients healthier, right in their own home.
In Sight: Better Preventive Care for Diabetics

Grady serves nearly 20,000 diabetic patients. That’s nearly 20,000 patients who need regular screenings for diabetic retinopathy – the leading cause of vision impairment and blindness among working-age adults. When caught in its early stages, the disease is highly treatable. Until recently, high patient volumes made scheduling annual retina exams in the Ophthalmology Clinic challenging. Our new Diabetic Teleretinal Program provides the answer by allowing diabetic patients to receive their retina exam during a routine primary care visit. It’s fast, it’s easy, but most importantly, it’s saving sight.
Robotic Surgery: High Tech Leads to Better Outcomes

Shorter hospitalizations, less pain, reduced blood loss and a lower risk of wound infection – these are some of the benefits of robotic surgery when compared to traditional surgery. Dr. Shaneeta Johnson, director of minimally invasive and bariatric surgery at the Morehouse School of Medicine, leads the team that has introduced robotics into Grady’s operating rooms. In the program’s first year, the number of robotic surgeries far exceeded goal. By investing to keep pace with the leading edge of technology, Grady is enhancing patient safety and facilitating faster, easier recoveries.
There's an epidemic in Atlanta – one that receives little attention, but profoundly affects a growing number of young people each year. An upsurge in HIV/AIDS cases is sweeping the southern U.S., and Atlanta is the epicenter. Grady’s Ponce Center is on the frontline of the crisis, having served more than 6,000 men, women and children in 2017. Recognized as one of the nation’s top HIV/AIDS centers, the increased demand for services and changing patient needs have led to plans for a larger and redesigned center. Private donations and public funding from Fulton and DeKalb counties will help us create an optimum environment for the delivery of award-worthy care.
CASS: The Next Step in Grady's Growth

Grady services are in high demand – surgical procedures alone increased by 8 percent last year. In fact, surgical volumes have increased over the last few years, making it essential that we invest in new facilities. The Center for Advanced Surgical Services, or CASS, will be one of the most important capital projects in our recent history. Funded as a 50/50 public-private partnership, the 200,000-square-foot facility will support more outpatient surgeries, increase operating room volume by 25 percent and specialty clinic capacity by 45 percent, all in a state-of-the-art, patient-centered environment. It’s an initiative that will better serve patients, while bolstering Grady's financial stability well into the future.
We begin by understanding that Grady cannot achieve anything without long-term sustainability and growth, and extending the progress that has been underway for over a decade. Success demands that Grady embrace a sound and disciplined approach to financial management. In 2017, we met all of our financial targets. That important achievement is all the more impressive when you consider that, as Georgia’s largest safety net hospital, 28 percent of our patients are uninsured and cannot pay for care.

Grady is concerned about the continued uncertainty at the federal level on the future direction of government healthcare reimbursement. Going forward, our executive leadership and the board will remain focused on ensuring sound financial performance, since it underpins our ability to provide services and fulfill our mission to care for all who need us.

One way we strengthen our mission is through the growth of strategic service lines. When we complete its construction, the Center for Advanced Surgical Services (CASS) will be our new home for ambulatory surgery and high-demand specialty clinics. CASS will attract patients, including insured and Medicare patients, who want to have surgery in state-of-the-art facilities, further diversifying our payor mix. It will also provide services to patients who currently cannot effectively access non-emergency services, improving our ability to serve community needs.

The CASS project, along with the transformation of the Ponce Center, is also an example of effective public-private partnership. It will be funded on a 50/50 basis by bonds issued by Fulton and DeKalb counties and contributions from our philanthropic partners. It demonstrates that all stakeholders are unified in support of strengthening the Grady mission.

As we confront an increasingly challenging and resource-constrained healthcare environment, Grady’s emphasis on new population health initiatives, several of which are described in this report, is the right strategic direction. These solutions help to keep patients healthier, support better recovery following illness, enhance the overall health of the community and address the crucial issues of access, cost and the efficient use of resources that our entire healthcare system must grapple with today.

Our board members, who bring diverse perspectives and highly relevant business and community experience to their work, are closely aligned with Grady’s strategic course. Grady’s leadership team has never been stronger – from both an administrative and clinical perspective. There is a unified vision shared among executive leadership, our board, the Grady Health Foundation board and the Fulton-DeKalb Hospital Authority Board of Trustees. All these leaders understand what a precious and irreplaceable resource Grady is for our community, and how vital its unique mission is.

I’m excited about the opportunities ahead for Grady to continue its positive trajectory. I wish to extend my sincere thanks to all our generous donors, our philanthropic and governmental partners, the many dedicated volunteers and thousands of engaged Grady employees for their commitment to this essential institution.
Grady’s Board: Committed, Engaged, Transparent

The oversight role of Grady’s board encompasses a wide range of responsibilities, including finance and quality. Members are deeply involved in guiding the health system’s strategic direction. The men and women of the board are diverse, engaged and committed to transparency as they fulfill their responsibilities to all Grady stakeholders.

To Our 2017 Donors

Our donors are a critical part of our success and we sincerely thank you for your contributions to Grady. The financial support we received from you – our annual donors, our campaign donors, our employees and sponsors of our annual signature event, the White Coat Grady Gala – directly impacted patient care. Your gifts helped us raise $19.4 million in 2017. Thank you.

In 2017, we launched a capital campaign to increase our capacity to serve patients through two strategic projects: the renovation and expansion of the Ponce Center, which houses our Infectious Disease Program – one of the largest and most comprehensive programs for the treatment of HIV/AIDs in the country; and, the creation of a new Center for Advanced Surgical Services, which will allow Grady to meet intensifying demand for acute and outpatient surgeries while improving access to healthcare. The campaign continues, and is being funded through a unique public-private partnership through which we are grateful to Fulton and DeKalb counties for their unanimous support for 50 percent of the project costs. We are actively seeking private support to match county funding, and a leadership gift from the Robert W. Woodruff Foundation has provided momentum and confirmation of Grady’s vital role in our community. We look forward to sharing project updates with you as we progress through the campaign.

Thanks to you, Grady consistently provided solutions throughout the year, addressing capacity and increasing efficiency for the benefit of our patients, physicians and medical staff. Philanthropic contributions, including those from Invest Atlanta, O. Wayne Rollins Foundation, The Zeist Foundation, The James M. Cox Foundation and others, helped us to complete phase one of the renovation of the Women’s and Infants’ Center, which delivers more than 3,000 babies each year and serves more than 40 Georgia counties.

Gifts from The Marcus Foundation facilitated the grand opening of an expansion of the Marcus Stroke and Neuroscience Center to address the needs of patients with neurological conditions. This outpatient center marks the first phase of expansion that will enable us to serve more patients and broaden research. Grady Hospital has become a regional and national leader in stroke care, with demand for its cutting-edge treatments encompassing metropolitan Atlanta and surrounding states.

We want to thank all of you who care so deeply about Grady. It is because of your giving that we are able to deliver innovative healthcare that not only improves, but also saves, lives. We also thank the members of the Grady Health Foundation Board for their support and advocacy throughout the year.

For more information about the Grady Health Foundation and how you can give, visit www.gradyhealthfoundation.org.
Grady is a beacon of hope for our community. We continually rise to the task of redefining healthcare through new technology, procedures and treatments that elevate health and well-being.”

W. Glenn Hilburn, Grady Health System
“As a volunteer with the Threads of Love organization, I have been fortunate enough to observe the level of care that is provided by the Grady NICU. Our volunteers make items for premature and sick babies and provide comfort packets for families of babies who don’t survive. Atlanta and North Georgia are so fortunate to have Grady’s state-of-the-art facility, and I personally have been blessed by my involvement with the nurses and staff at the NICU.”

Robin Messer, Federal Home Loan Bank of Atlanta
Grady Volunteer
“While I have always thought of Grady as my go-to hospital for catastrophic accidents, I now realize how important and well-rounded an institution it really is. I am honored to be a Grady husband of a long-time Grady doctor, as well as a Grady dad of a daughter who trained there. Grady is very special to me and my family.”

Eliot Arnovitz, M&P Holdings
Grady Health Foundation Board Member
“If anyone has seen the commercials on television and billboards in Atlanta City limits, Grady Hospital is and always will be the most giving hospital in Georgia that I know of. When someone says they would not be here without Grady, believe they are telling you the truth. Thank you Grady.”

Xeno J. Evans, Grady Patient & Donor
“We support Grady because it is in, and represents, the heart of Atlanta. We have to keep Grady strong for Atlanta to be strong.”

H. James Dallas, James Dallas & Associates
Grady Memorial Hospital Corporation
Board Member
“As I think of my years on the Foundation Board and years as a Grady Ambassador, “Proud” is the first word that comes to mind. The real stories of Grady’s good actions are endless…and I will always be a proud ambassador for Grady.”

GRADYHEALTHFOUNDATION.ORG
For more than 125 years Grady Health System has been the cornerstone of healthcare in the Atlanta region. In 2017, we continued to do what we do best – innovate. Spurred by growing and changing patient needs, we devised new solutions to meet the challenges of today’s evolving healthcare needs. By tapping deeper into the talents of our exceptional staff, we’re serving more patients than ever, with many receiving services that extend beyond quality medical care and embrace the total needs of an individual. By teaming with our partners – physicians from the Emory and Morehouse schools of medicine – the entire community benefits from unparalleled expertise in specialties like trauma, cancer, burn, neurology, cardiology and the treatment of chronic diseases. Add to that our focus on wellness through family medicine and senior care and it’s easy to see Grady’s impact on the thousands of lives we touch each year.
